ROAD TRACTION.

There is every possibility that Boston inventive genius stands a very good chance of winning the \$5 000 purse offered as first prize to the 500mile Pan-American Exposition contest in August which is to be run over the roads from New York city to Buffalo. Every motor vehicle manufacturer in this country and Europe is looking for ward to pulling off this motor carriage event, which, saide from the financial prize, means success to the manufactu-rer of the winning vehicle. There has been built in New York ty a Boston irventor a steam vehicle which seems to bid fair to solve the long-vexed prob-lem of how to successfully handle steam as a motor vehicle power, something which the manufacturers of gasoline and electric carriages claim has not yet been accomplished.

Rollin Abell, the inventor of the

steam motor, claims to have accomplished all these things. He exhibits a two-horsepower engine which is attached to an ordinary bicycle, and is now hard at work attaching a large motor of considerably more horsepower to a heavy racing carriage.

The motor upon the bicycle weighs but 15 pounds and is two-horsepower.

It is a three-cylinder single acting en-gine of the brotherhood type so well known to engineers on account of its favorite use on the Silsbee steam fire engines in the different fire departments of our large cities. It is provided with a rotary valve which operates the three cylinders in rotation with but one moving part. There are ball-bear-ings on the sprocket or driving side and s plain bearing on the valve side, which s to suffer but little strain. The motor is so narrow, being but a trifle over two inches wide, that can be attached to the sides of the frame can be attached to the sides of the frame of a bicycle instead of, like other motors, having to be placed in the middle of the frame. This allows it to be placed in a position where the chain does not interfere with the rider in any way, and the tread of the whole is of the regulation width

way, and the treat of the whole is of the regulation width.

The large sprocket on the rear hub, iostead of being screwed on, is provided with a one-way driving clutch, so that in coasting on the machine the motor is at rest and does not offer any resistance to the progress of the wheel. On opening the throttle the motor immediately engages the wheel and drives as though rigidly connected. It also al-lows the wheel to be handled without pushing against the motor. The whole bicycle, complete with everything on, weighs but 85 pounds, which is lighter by at lesst a good many pounds than any other motor bicycle upon the mar-ket per horse-power.

You will waste time if you try to cure indigestion or dyspepsia by starving yourself. That only makes it worse when you do eat heartily. You always need plenty of good food properly digested. Kedol Dyspepsia Cure is the result of years of scientific research for something that would digest not only some elements of food but every kind. And it is the one remedy that will do it.

FOUNDERS AND MACHINISTS. & H. AITCHESON, Practical Machinists and Engineers

WM. 8. MOORE, Machinist, Iron and Brass Founder,

BY ELEVATING THE QUALITY of our coal we lower the price in economy of consumption. Consumers will find that it is cheaper to use our high grade Loc Coal, that has been screened and freed from slate and stone, than that of an inferior grade. It gives more heat, less ashes and burns longer than any other coal, and our prices are as low as any. Coal and Wood under cover,
